

DATA 255 Deep Learning Technologies

Oct 9, 2025

Taehee Jeong, Ph.D.

Mid-term Exam (15%)

- Exam will be based on the course material covered in class.
- Thursday, October 16
- 6:00pm to 8:00pm

Mid-term Exam (15%)

- Total number of questions is 5.
- The total point is 15 points. 1 point is equal to 1% in total grading.
- The midterm exam will be open-book.
- There is no limit on the number of textbooks, papers, or notes you can bring.
- Cheat sheets are allowed too.
- It will be pen and paper.
- Please bring your calculator.

Group project schedule

- Aug 28^[2]: Group formation (on canvas)
- Sept 11^[4]: Project proposal (within 5 mins)
- Oct 9 ^[8]: Project progress checkup (within 10 mins) – 5 pts
- Nov 13 ^[13]: Submit presentation slides/source codes/report (within 6 pages) – 5 pts
- Nov 13 ^[13], 20 ^[14]: Project presentation (within 20 mins) – 10 pts

Project Progress Check

- The total point is **5** points. 1 point is equal to 1% in total grading.
- Each group will have **up to 10 minutes** for their progress presentation.
- *Please note that time will be followed strictly, and presentations exceeding the limit will be penalized.*
- There is **no fixed format** you must follow for your slides - you can structure it whatever you want.

Note:

Large Language Models (LLMs) and reinforcement learning are **not within scope** for this course project. Please avoid basic image classification or forecasting models, as these are considered outdated and not aligned with the project expectations.

Grading criteria: Project Progress Check

- 1. Project Domain:** Clearly explain the area or domain your project belongs to (for example, medical imaging, scene understanding, anomaly detection, etc.).
- 2. Current Baseline / Problem:** Describe the status or limitations of existing works - what baseline deep learning models exist, and what challenges or gaps remain.
- 3. Dataset and Evaluation Metrics:** For the relevant works, Identify the relevant dataset(s) used and specify the evaluation metric(s) (e.g., accuracy, FID) and baseline performance.
- 4. Proposed Approach / Technical Novelty:** Explain your planned approach in terms of technical novelty or architectural improvement, and how it aims to overcome the identified limitations(From literature survey)
- 5. Relevance to Coursework:** Your project should primarily relate to the topics covered in this course (deep learning and computer vision).
